

## INK Edge September Top Gold: Beta Hunt may be the discovery game changer

As of: Monday, September 17, 2018

September 18, 2018 - Joining our Top 20 Gold list this month is RNC Minerals (Mostly Sunny; [RNX](#)) after the stock exploded higher on news of a visible gold discovery at its Beta Hunt mine in the Kambalda district of Western Australia. For a couple of reasons, the find could turn out to be a game changer for the junior gold market which has had a hard time competing for attention against the speculative frenzy in marijuana stocks and an earlier mania in cryptocurrencies. First, the company's [September 9th press release](#) included pictures of some of the specimens discovered over a 44 cubic metre cut of 130 tonnes. The grade equated to a staggering 2,200 grams per tonne of gold (g/t). Long suffering investors in the junior mining space can only hope that the pictures of the museum-quality specimens will pique the curiosity of other investors who have so far ignored the group.

*4,060 ounces of gold from the Fathers Day Vein*

Secondly, as John Kaiser explained in his [September 11th Discovery Watch program \(starts at the 9:28 mark\)](#), there is a good possibility that the find is more than just a one hit wonder as the gold likely originates from fluid lava flow which could have delivered mineralization in multiple locations.

Alternatively, it could turn out to be an erratic anomaly that only future exploration will be able to rule out. So far, however, so good. On [September 16th](#) the company reported it had doubled the strike length of the high grade coarse gold structure, now dubbed the Fathers Day Vein, to approximately 10 metres, and found two more large specimens.

Third, we may have seen or be near the top in marijuana stocks. The Horizons Marijuana Life Sciences ETF ([HMMJ](#)) has so far failed to take out its January 9th high of \$25.56 despite soaring both Monday and Tuesday on a hyped up story that Coke (Mixed; [COKE](#)) was exploring CBD (cannabidiol) infused beverages. Of course, pot stocks could continue to soar in the lead up to legalization day on October 17th. However, at some point, investors will probably get tired of waiting for takeover deals which are rumoured to be on the way but do not show up at current bubbly prices.

With the run-up of RNX, we have seen an insider sell some stock. However, the amount is small (less than \$100,000) and represents about 5.5% of his overall account holdings. Generally speaking, when an insider sells a small amount, it is often because he or she needs to raise some cash and it turns out to be a positive sign.

The RNC Minerals discovery has overshadowed another discovery this summer in Ontario by Great Bear Resources (Mostly Sunny; [GBR](#)) which also joins the list this month. On [August 22nd, it announced](#) it had drilled 16.35 metres of 26.91 g/t gold and 7.00 metres of 44.47 g/t gold in two holes at its Dixie Project in the Red Lake District.

*The September Top 20 Gold stock list was generated based on [INK Edge V.I.P. outlook](#) rankings as of September 17th, 2018*

*At time of publication, one or more INK employees hold positions in Sierra Metals Inc. (SMT), Maya Gold & Silver Inc. (MYA), and RNC Minerals (RNX) from the current Top Gold and Precious Metals list.*

## Symbols and Abbreviations

The INK Edge Outlook is a great tool that investors can use to help identify opportunity and risk. The INK Edge Outlook ranks a stock based on our composite V.I.P. criteria of Valuations, Insider commitment and Price momentum. Stocks are assigned one of 5 composite rankings:

-  Sunny (most favourable, ranking in top 10%)
-  Mostly Sunny (ranks in next 20%)
-  Mixed (middle 40%)
-  Cloudy (next 70-90%)
-  Rainy (least favourable, bottom 10%)
